November 3, 2009

To Whom It May Concern:

Rose State College’s Cyber Security program has been an active member of the Cyber Security Education Consortium (CSEC) since its conception in 2002. The CSEC is based in Oklahoma and has served as an Advanced Technological Education (ATE) Regional Center for the National Science Foundation (NSF) consisting of seven states.

Rose State College prepares students and employees for entry-level employment, career advancement, and customized education in Computer Security. Rose State College was the first and currently the only community college in the nation to offer six National Training Standards for System Administration in Information Systems Security certificates (NSTISSI 4011-4016). Rose State College helps to provide an understanding of upcoming technologies such as wireless, biometrics, remote access, secure coding, mobile devices and digital forensics investigations.

JGV Engineering is one of the few civil engineering and land surveying firms with experience in wind energy in the state of Oklahoma. Safe guarding the engineering design data for the wind energy providers that generate much of the wind energy in Oklahoma is paramount. Protecting these energy giants after they join the energy grid is equally important. We also provide engineering design for municipal infrastructure projects including water supply distribution projects and road and bridge projects. We have designed numerous police stations, fire stations and JGV Engineering was the civil engineer for the Oklahoma City 911 Center that was designed to meet strict blast criteria and be F5 tornado resistant. The need exists now for the type of students Rose State can prepare with this program.

We would like to encourage you to consider allowing Rose State College to offer a Bachelor of Applied Technology (BAT) in Digital Forensics. There is definitely a need for this to occur to develop and maintain a competent workforce.

Sincerely,

JGV Engineering, Inc. dba JGV Engineering
